PRODUCT SUMMARY

The HL954x Series are ultra-broadband bias tees with a maximum insertion loss of 1.8 dB throughout the specified bandwidth range.

The HL954x blocks any existing DC signal and allows for the insertion of a DC bias current into a circuit with minimal perturbation of the impedance of a 50 ohm transmission line.

These devices can be used for biasing amplifiers, lasers, optical modulators, and other devices.

Applications include 112 Gbps PAM4 communications systems, optical communication systems, high-speed data systems, level shifting, cascading, and interfacing between devices with incompatible DC operating points.
